

## PROJECT OBJECTIVES

Date	10 November 2022
Team ID	PNT2022TMID21501
Project Name	Fertilizers Recommendation System For Disease Prediction
Maximum Marks	4 Marks

### **Problem Statement:**

Agriculture is the most important sector in today's life. Most plants are affected by a wide variety of bacterial and fungal diseases. Diseases on plants placed a major constraint on the production and a major threat to food security. Hence, early and accurate identification of plant diseases is essential to ensure high quantity and best quality. In recent years, the number of diseases on plants and the degree of harm caused has increased due to the variation in pathogen varieties, changes in cultivation methods, and inadequate plant protection techniques.

An automated system is introduced to identify different diseases on plants by checking the symptoms shown on the leaves of the plant. Deep learning techniques are used to identify the diseases and suggest the precautions that can be taken for those diseases.

### **The objectives of the project are**

- To preprocess the images.
- To apply the CNN algorithm to the dataset.
- To understand how deep neural networks detect the disease.
- To know how to find the accuracy of the model.
- To build web applications using the Flask framework
